| (1 - 20) <b>G</b>                                                     |           |           |
| <i>Not environmentally friendly - higher CO<sub>2</sub> emissions</i> |           |           |

England & Wales

EU Directive 2002/91/EC

### Estimated energy use, carbon dioxide (CO<sub>2</sub>) emissions and fuel costs of this home

|                          | Current                        | Potential                      |
|--------------------------|--------------------------------|--------------------------------|
| Energy use               | 46 kWh/m <sup>2</sup> per year | 35 kWh/m <sup>2</sup> per year |
| Carbon dioxide emissions | 0.3 tonnes per year            | 0.1 tonnes per year            |
| Lighting                 | £60 per year                   | £33 per year                   |
| Heating                  | £136 per year                  | £138 per year                  |
| Hot water                | £66 per year                   | £66 per year                   |

To see how this home can achieve its potential rating please see the recommended measures.

For advice on how to take action and to find out about offers available to help make your home more energy efficient, call **0800 512 012** or visit **[www.energysavingtrust.org.uk/myhome](http://www.energysavingtrust.org.uk/myhome)**

## About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by the NHER Accreditation Scheme, to a scheme authorised by the Government. This certificate was produced using the SAP 2005 assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections) (England and Wales) Regulations 2007 as amended. A copy of the certificate has been lodged on a national register.

Assessor's accreditation number: NHER003837

Assessor's name: Mr Harry Silo

Company name/trading name: Whitecode Design

Address: Highfield House,, 2 West Hill, Dartford, Kent, DA1 2EW

Phone number: 01322 289977

Fax number:

E-mail address: design@whitecode.co.uk

## If you have a complaint or wish to confirm that the certificate is genuine

Details of the assessor and the relevant accreditation scheme are as above. You can get contact details of the accreditation scheme from their website at [www.nher.co.uk](http://www.nher.co.uk) together with details of their procedures for confirming authenticity of a certificate and for making a complaint.

## About the building's performance ratings

The ratings on the certificate provide a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average Energy Efficiency Rating for a dwelling in England and Wales is band E (rating 46).

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at [www.communities.gov.uk/epbd](http://www.communities.gov.uk/epbd).

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings in the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

## About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple everyday measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

### Visit the Government's website at [www.communities.gov.uk/epbd](http://www.communities.gov.uk/epbd) to:

- Find out how to confirm the authenticity of an energy performance certificate
- Find how to make a complaint about a certificate or the assessor who produced it
- Learn more about the national register where this certificate has been lodged
- Learn more about energy efficiency and reducing energy consumption

## Recommended measures to improve this home's energy performance

73 Enterprise Place  
175 Church Street East  
WOKING  
GU21 6AG

Date of certificate: 7 December 2008  
Reference number: 9052-2853-6222-0108-0361

### Summary of this home's energy performance related features

The following is an assessment of the key individual elements that have an impact on this home's performance rating. Each element is assessed against the following scale: Compliant / Average / Good / Very good.

| Element               | Description                                                             | Current performance |               |
|-----------------------|-------------------------------------------------------------------------|---------------------|---------------|
|                       |                                                                         | Energy Efficiency   | Environmental |
| Walls                 | Average thermal transmittance 0.31 W/m <sup>2</sup> K                   | Good                | Good          |
| Roof                  | Average thermal transmittance 0.00 W/m <sup>2</sup> K                   | Very good           | Very good     |
| Floor                 | (other premises below)                                                  | -                   | -             |
| Windows               | Fully double glazed                                                     | Good                | Good          |
| Main heating          | Community scheme with CHP                                               | Good                | Very good     |
| Main heating controls | Charging system linked to use of community heating, programmer and TRVs | Good                | Good          |
| Secondary heating     | None                                                                    | -                   | -             |
| Hot water             | From community CHP scheme                                               | Good                | Very good     |
| Lighting              | Low energy lighting in 16% fixed outlets                                | Compliant           | Compliant     |
| Air tightness         | (not tested)                                                            | -                   | -             |

**Current energy efficiency rating** **B 87**

**Current environmental impact (CO<sub>2</sub>) rating** **A 97**

Thermal transmittance is a measure of the rate of heat loss through a building element; the lower the value the better the energy performance.  
Air permeability is a measure of the air tightness of a building; the lower the value the better the air tightness.

### Low and zero carbon energy sources

None

## Recommendations

The measures below are cost effective. The performance ratings after improvement listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table.

| Lower cost measures (up to £500)                              | Typical savings per year | Performance ratings after improvements |                      |
|---------------------------------------------------------------|--------------------------|----------------------------------------|----------------------|
|                                                               |                          | Energy efficiency                      | Environmental impact |
| 1Low energy lighting for all fixed outlets                    | £26                      | B 89                                   | A 98                 |
| Total                                                         | £26                      |                                        |                      |
| <b>Potential energy efficiency rating</b>                     |                          | <b>B 89</b>                            |                      |
| <b>Potential environmental impact (CO<sub>2</sub>) rating</b> |                          | <b>A 98</b>                            |                      |

## Further measures to achieve even higher standards

None.

Improvements to the energy efficiency and environmental impact ratings will usually be in step with each other. However, they can sometimes diverge because reduced energy costs are not always accompanied by a reduction in carbon dioxide (CO<sub>2</sub>) emissions.

## About the cost effective measures to improve this home's performance ratings

### **Lower cost measures (typically up to £500 each)**

These measures are relatively inexpensive to install and are worth tackling first. Some of them may be installed as DIY projects. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice before carrying out DIY improvements.

#### **1Low energy lighting**

Replacement of traditional light bulbs with energy saving recommended ones will reduce lighting costs over the lifetime of the bulb, and they last up to 12 times longer than ordinary light bulbs. Also consider selecting low energy fittings when redecorating; contact the Lighting Association for your nearest stockist of Domestic Energy Efficient Lighting Scheme fittings.

## About the further measures to achieve even higher standards

Not applicable.

## What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO<sub>2</sub> emissions. The papers you are given by the builder and the warranty provider will help you in this.
- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme.
